Farbtupf - Der Herzbaum

Die vergessenen Pfade

A connected Swiss woodland, a fox to guide, and short helping quests.

The chosen adventure

Five clearings form a loop around the Heart Tree. The fox reconnects neighbours and shared places through Meet, Reconnect and Gather. The first quest reopens a crossing between Beaver and Brown Hare.

Understand before reading

The player is 6-7 and initially cannot read. Pictures, short spoken actions, demonstrations and fresh attempts explain the task. Reading ability and subject difficulty stay independent.

Room for many puzzles

Ten story milestones organise growing quest collections. Fifteen activity places can host many episodes and new puzzle families. The 120-episode example illustrates capacity; that content has not been authored.

A concrete next build

The proposed local Three.js slice includes the tree, brook, garden, fox movement, two neighbours, beginner guidance, one flat activity, a correct return and a persistent bridge payoff.

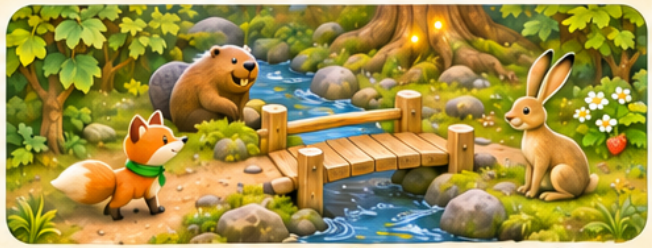
This pack consolidates design direction. No app implementation, child observation or production voice recording has been performed.

World and story

THE HEART TREE · THE FORGOTTEN PATHS

One connected forest · Many short quests · A lasting story

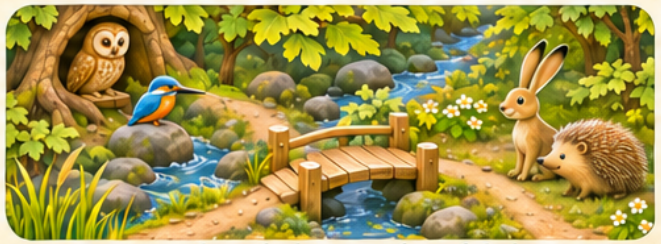
MEET



Know the neighbours. Help with small problems.

4 story milestones, including the opening

RECONNECT



Restore shared places and useful shortcuts.

3 shared restoration projects

GATHER

Bring everyone together at the Heart Tree.

2 contributions and a finale

10 story milestones · Growing quest collections · Lasting world changes

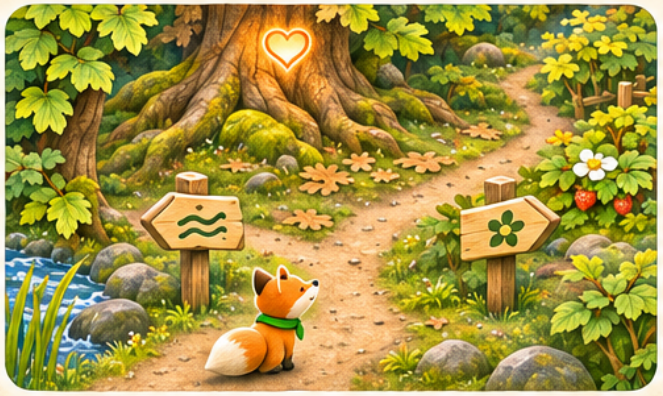
Many flat puzzles can join the same forest.

The selected opening

A BRIDGE TO THE NEIGHBOURS

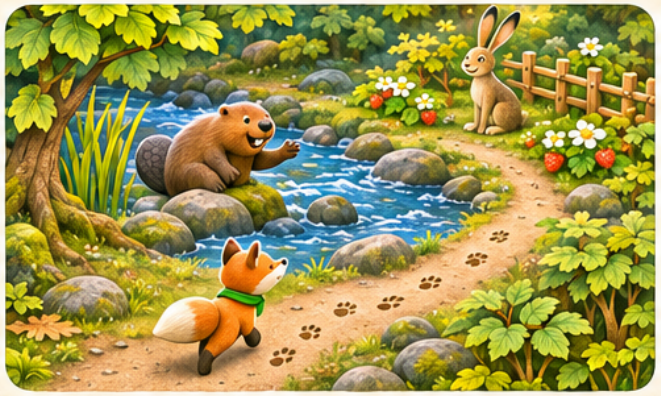
The opening quest · Six story beats · Concept storyboard

1 · THE QUIET CLEARING



A quiet tree and two nearby paths.

2 · WALK TO THE BROOK



Follow the brook and meet Beaver.

3 · A NEIGHBOUR NEEDS HELP

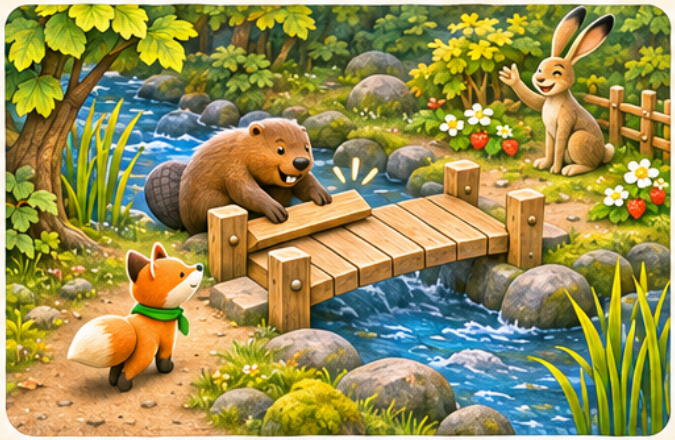
The old crossing can bring neighbours together.

4 · THE FLAT PUZZLE

Hilf dem Biber

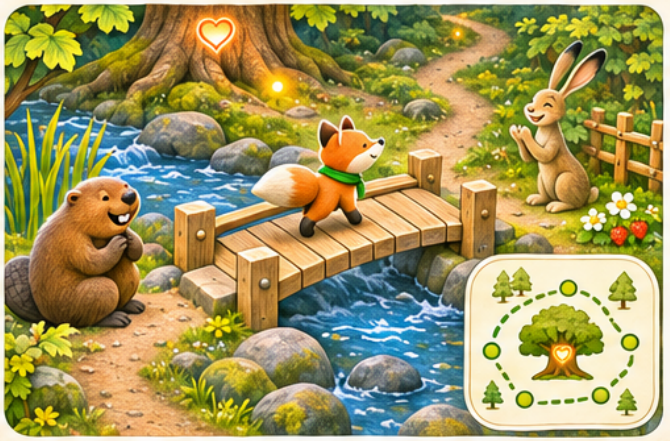
Play an existing flat puzzle.

5 · RETURN TO THE SAME PLACE



Beaver finishes the crossing. The repair stays.

6 · WALK ACROSS YOUR CHANGE



The full loop opens. Your first help counts.

Walk → Meet → Flat puzzle → Reconnect → Explore further

Your first repair carries into the story.

Capacity for a growing library

A FOREST WITH ROOM FOR MANY PUZZLES

The story provides milestones. The places keep offering adventures.

Five familiar clearings

Several activity places in each clearing

One place, many short quests

Examples; individual puzzle mapping comes later

10 story milestones

Meet → Reconnect → Gather

Growing quest collections

Puzzle activities & practice

New activities can join familiar places

Illustrative capacity: 5 clearings × 3 activity places × 8 episodes = 120 short quests

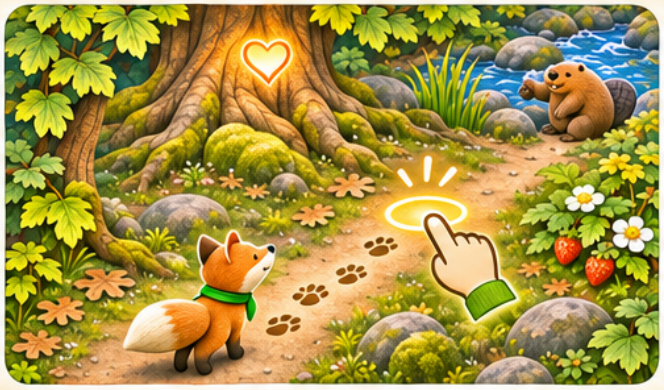
Capacity example, not completed content or 120 different puzzle mechanics.
The player sees a few invitations at a time.

Guidance before reading

UNDERSTAND BEFORE READING

See it · Hear it · Try it

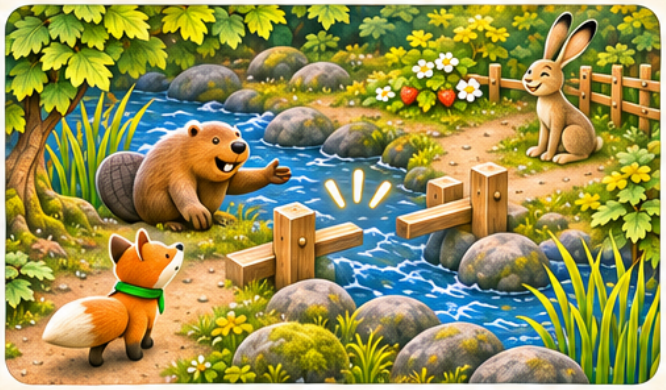
1 · ONE CLEAR ACTION



Show where and how to move.

„Tippe auf den Weg.“

2 · A VISIBLE REASON TO HELP



The scene explains the small goal.

„Hilfst du mir?“

3 · WATCH ONE EXAMPLE

A practice example demonstrates the rule.

„Schau, so geht’s.“

4 · NOW THE CHILD TRIES

A fresh example checks understanding.

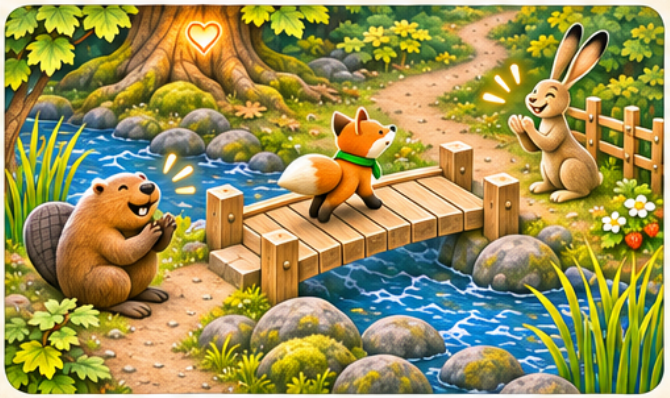
„Jetzt du.“

5 · HELP CAN BE REPEATED

Hear the instruction or see the rule again.

„Schau noch einmal.“

6 · SEE WHAT YOUR HELP CHANGED



A visible result connects puzzle and story.

„Jetzt können wir hinüber!“

World goals, instructions, help and feedback work before reading.

Illustrative guidance for a pattern activity; final puzzle selection comes later.

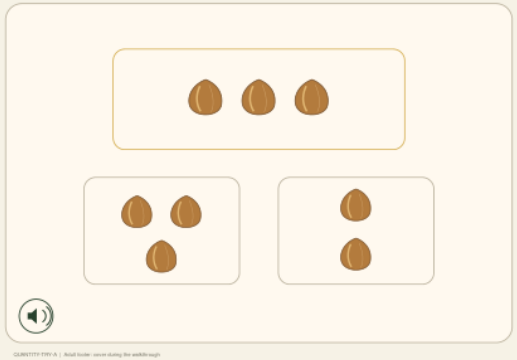
The child interface

Picture-only reference interactions

Three ways to understand before reading

Adult overview · the child sees one card at a time

Quantity

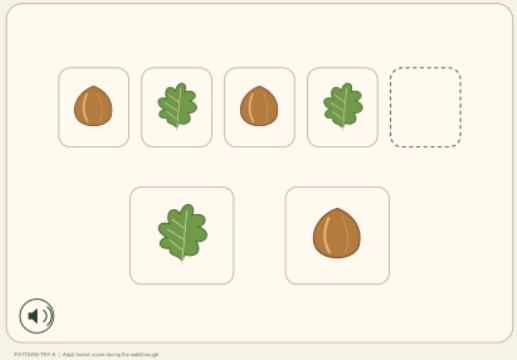


Wo sind gleich viele Nüsse?

Match the amount, using visible objects.

Digits are not needed for this reference.

Pattern

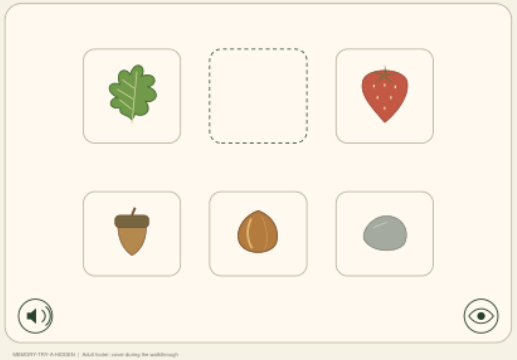


Wie geht es weiter?

Choose the next picture in the sequence.

A fresh arrangement follows the demo.

Missing object



Was fehlt?

Remember what was shown before hiding.

The LOOK card is a separate page.

See the goal → hear one action → watch an example → try → ask again

Static design materials · no child observations yet · the application is unchanged

From design to the first playable slice

The next concrete implementation is small enough to review as a complete experience:

- A native woodland scene with actual 3D terrain and character silhouettes.
- Tap/click walking, a fixed angled camera and one current pictured goal.
- The bridge request, one guided existing flat activity and a pictured return.
- Story completion independent of whether a new learning star is earned.
- A bridge that becomes usable and stays repaired after reload.
- Preservation of existing progress, artwork, stickers and learning-stage identities.

Evidence still to collect

Actual child understanding, target-device interaction, final 3D art quality and reliable offline voice guidance need validation. The 22-group readiness matrix specifies the instruction work; it does not certify the exercises.

Implementation boundary

The original instruction to keep the app unbuilt remains active. Starting the local slice is the next substantial scope decision. Deployment and publication are outside that first build scope.
